

# Carpet Cleaning Guide Dry Foam Method

## **Carpet Cleaning Guide: Dry Foam Method**

Dry foam carpet cleaning is a relatively long task and it is recommended that it is done only when needed rather than on a regular basis.

### **Preparation of the area**

- Assemble all the equipment and ensure it is in good working order, make sure the carpet is clear and place out any necessary caution signs.
- Pick up any large items of rubbish and vacuum carpet.
- Pre-treat any spots or stains in the area to be cleaned. Always ensure that you test a small inconspicuous area before use to check for colour fastness.

### **Dry Foam Cleaning Advice**

- Prepare dry foam carpet shampoo ensuring the correct dilution rate and pour into solution tank. Take care to check solution on an inconspicuous area beforehand as a precaution against carpet damage.
- Fit the shampoo brush to the rotary machine.
- Ensure that only a trained operative uses a rotary floor cleaning machine. Using the machine to ensure a consistent level of foam is created in all areas.
- Leave the carpet to dry.
- Vacuum the area.

### **Equipment Required: -**

- Upright or Tub Vacuum (Suggested products: - 21900 / 11360)
- Filters / Bags (Suggested products: - 21470 / 91810)
